CERTIFICATE OF ABSENCE OF GMO & GAMMA IRRADIATION

Protease Alkaline (Bacillus licheniformis)

To Whom it May Concern:

The material contains Protease Alkaline from fermentation, standardized with maltodextrin from corn. ERC Catalysts, Inc. only sources Protease Alkaline produced from Non-GMO fermentation. The maltodextrin used may be from a GMO corn source; however, during the production of maltodextrin, the corn DNA is denatured, degraded, or removed. Therefore, corn DNA should not be present in measurable amounts in the maltodextrin used, or in the final Protease Alkaline product.

We further declare that the product is not treated with ionizing radiation (gamma rays) or with ethylene oxide (ETO).
